COFACTOR: Binds 1 calcium ion per subunit (By similarity).
SUBCELLULAR LOCATION: Secreted (By similarity).
TISSUE SPECIFICITY: Expressed by the venom gland.
SIMILARITY: BELONGS TO THE PHOSPHOLIPASE A2 FAMILY. GROUP:

nome Biol. 3: RESEARCH0080.1-RESEARCH0080.8(2002).

FUNCTION: BINDS STEM LOOP II OF U1 SNRNA. IT IS THE FIRST SN-RNP
TO INTERACT WITH PRE-MRNA. THIS INTERACTION IS REQUIRED FOR THE
SUBSEQUENT BINDING OF U2 SN-RNP AND THE U4/U6/U5 TRI-SN-RNP (BY
SINELARITY). PLAYS A ROLE IN REGULATING SEX-LETHAL SPLICING.
SUBUNIT: BELONGS TO THE SPLICEOSOME WHERE IT IS ASSOCIATED WITH
SN-RNP U1.
                                                                                                                                                                                                                                                                                                                                             Local
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               BL; M89775; AAA28441.1; ...

                                                        Composed of SNRPB2, HPRP8BP and CRNKLI.
DISBASE: Patients with systemic lupus erythematosus antibodies which interact with sn RNP proteins.
SIMILARITY: BELONGS TO THE UI A/B" FAMILY.
SIMILARITY: Contains 2 RNA recognition motif (RRM)
                                                                                                                                                           FUNCTION: Involved in pre-mRNA splicing. T associated with sn-RNP U2. It binds stem lin presence of the A' protein.
SUBUNIT: Present in a spliceosome complex
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         sapiens

No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    CC polypeptide (II) sequences. (I) is useful as hybridisation probes, CC polymerase chain reaction (PCR) primers, oligomers, and for chromosome CC and gene mapping, and in recombinant production of (II). The CC polymucleotides are also used in diagnostics as expressed sequence tags for identifying expressed genes. (I) is useful in gene therapy techniques CC to restore normal activity of (II) or to treat disease states involving CC (II). (II) is useful for generating antibodies against it, detecting or CC quantitating a polypeptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical inaging of sites expressing (II). (I) and (II) are useful for treating CC inaging of sites expressing (II). (I) and (II) are useful for treating CC disorders involving aberrant protein expression or biological activity. CC The polypeptide and polynucleotide sequences have applications in CC disorders, forensics, gene mapping, identification of mutations cresponsible for genetic disorders or other traits to assess biodiversity and to produce other types of data and products dependent on DNA and CC amino acid sequences. ABG00010-ABG30377 represent novel human CC diagnostic amino acid sequences of the invention.

CC Note: The sequence data for this patent did not appear in the printed constitution, but was obtained in electronic format directly from WIPO at the first invention.

AAB20924
Sequences AAB20901-B20949 represent Drosophila melanogaster odorant CC receptors. These proteins function as olfactory receptors, and CC are thought to be members of the G protein-coupled receptor (GPCR) superfamily, which is characterised by the presence of 7 CC transmembrane helices. Nucleic acids encoding the Drosophila odorant CC receptors may be used to generate expression constructs, host cells which express CC containing such constructs, and transgenic insects. Cells which express CC which modulate expression of these genes, and in methods to identify receptor binding partners. The Drosophila odorant receptor nucleic acids come as those which damage crops or transmit disease. The odorant receptor proteins may be used to identify agents which modulate their receptor proteins may be used to identify agents which modulate their activity, to identify binding partners, as antigens to raise antibodies,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            밁

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The present sequence is the previously identified Drosophila melanogaster odorant receptor DOR83. The odorant genes and proteins, such as those provided by the invention, are useful as they aid in the study of the olfactory organ in mammals, as well as aiding the understanding of the link between odour recognition and behaviour in insects. They also enable the identification of compounds capable of activating and inhibiting the receptors, allow the control of pest populations via the use of alarm odour ligands and via the use of ligands which interfere with the

The proteins may be also be used in methods of behaviour modification. Such methods may be used to study or modify insect behaviour in response to odorants such as pheromones. Modification of insect behaviour has a wide range of applications, such as in pest control (e.g., by disrupting the feeding or mating behaviours of pest species), or for enhancing plant pollination (by attracting pollinator species). Odorant receptor proteins and/or nucleotides may also be used to identify appetite suppressants, to trap odours of a specific type, as blosensors for the detection of explosives, drugs, perfumes or pollutants, and in apiculture to modify the behaviour of bees, for example, to increase the production of royal
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                 Simian immunodeficiency virus.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The invention relates to a single exon nucleic acid probe (SENP) (I) for measuring human gene expression in a sample derived from human adult liver, comprising one of 13109 defined nucleotide sequences given in the specification (or complements) fragments). The probe hybridises at high stringency to a nucleic acid molecule expressed in the human adult liver. (I) may be used for predicting, measuring and displaying gene expression in samples derived from human adult liver. The genes identified may be involved in genetic liver diseases such as cirrhosis, hyperilipoproteinaemia, hyperilipidaemia and hypercholesterolaemia which is associated with coronary heart disease. ABG47348-ABG5930 represent Note: The sequence information for this patent does not appear in the printed specification but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.

                                                                                                                                                                                                                                                                                                                                                          The invention relates to a single exon nucleic acid probe for measuring human gene expression in a sample derived from human foetal liver. The single exon nucleic acid probes may be used for predicting, measuring and displaying gene expression in samples derived from human fetal liver. The present sequence is a peptide encoded by a single exon nucleic acid probe of the invention.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The present invention relates to single exon nucleic acid probes for measuring human gene expression in a sample derived from human heart (see ABA21535-ABA41305). The present sequence is a protein encoded by one such probe. The probes may be used for predicting, measuring and displaying gene expression in samples derived from the human heart via microarrays. By measuring gene expression, the probes are useful for predicting, By measuring gene expression, the probes are useful for predicting, diagnosing, grading, staging, monitoring and prognosing diseases of the human heart and vascular system e.g. cardiovascular disease, hypertension, cardiac arrhythmias and congenital heart disease.

Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at the publicular ished not sequence.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The present invention provides a number of single exon nucleic acid probes which are derived from genomic sequences expressed in the human bone marrow. They can be used to measure gene expression in bone marrow samples, which may enable the improved diagnosis and treatment of cancers such as lymphoma, leukaemia and myeloma. The present sequence is a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Sequence
                       Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.
                                                                        The present invention relates to human single exon nucleic acid probes (SENP: see AAI10068-AAI28459). The present sequence is a peptide encode by one such probe. The SENPs are derived from human HeLa cells. The SENE can be used to produce a single exon microarray, which can be used for measuring human gene expression in a sample derived from human cervical epithelial cells. By measuring gene expression, the probes are therefor useful in grading and/or staging of diseases of the cervix, notably
                                                                                                                                                                                                                                                                                                                                                                                                                                    30-JAN-2001;
                                                                                                                                                                                                                                                                                                                                                                                                                                                            09-AUG-2001
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         cervical cancer
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Probe; human; microarray; gene
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Peptide #8160
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        12-OCT-2001
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           AAM21726
                                                                                                                                                                                                          Human genome-derived single exon nucleic acid probes useful for analyzing gene expression in human cervical epithelial cells -

                                                                                                                                                                                                 The present invention relates to single exon nucleic acid probes (SENP: see AAI31315-AAI57546). The present sequence is a peptide encoded by one such probe. The probes are useful for producing a microarray for predicting, measuring and displaying gene expression in samples derived from human placenta. The probes are useful for antenatal diagnosis of

measure gene expression in human lung samples Spatially-addressable set of single exon nucleic acid probes, used ç

Claim 27; ij ö 634pp; English.

CC nucleic acid expressed in the human lung; measuring gene expression in a CC sample derived from human lung, comprising (a) contacting the array with CC a collection of detectably labeled nucleic acids derived from human lung (masuring the label detectably bound to each probe of CC (a) algorithmically predicting at least one exon from genomic sequences (C (a) algorithmically predicting at least one exon from genomic sequences (c) the eukaryote; and (b) detecting specific hybridisation of detectably CC labeled nucleic acids from eukaryote lung mRNA, to a single exon probe, of having a fragment identical to the predicted exon, the probe is included in the above mentioned microarray; assigning exons to a single gene, CC comprising (a) identifying exons from genomic sequence by the method CC above and (b) measuring the expression of each of the exons in several CC tissues and/or cell types using hybridisation to a single exon CC expression of the exons in the tissues and/or cell types indicates that the exons should be assigned to a single gene; a peptide comprising one of 12011 sequences, mentioned in the specification, or encoded by the expression analysis, and for identifying exons in a gene, particularly CC using human lung derived mRNA and for the study of lung diseases (COPD), interstitial lung disease (ILD), familial idiopathic pulmonary CC thorsis, neurofibromatosis, tuberous sclerosis, Gaucher's disease, nulmonary and content of the content of the study of the pulmonary of the study of the secondary. The probes are used for gene approached the secondary of the study of lung disease (COPD), interstitial lung disease (ILD), familial idiopathic pulmonary content of the secondary of the seco probes; Niemann-Pick disease, Hermansky-Pudlak syndrome, sarcoidosis, pulmonary haemosiderosis, pulmonary histiocytosis, lymphangioleiomyomtosis, nucleic acid probes for measuring gene expression in a sample derive from human lung comprising single exon nucleic acid probes having or 12614 nucleic acid sequences mentioned in the specification, or the complements or the 12387 open reading frames derived from the 12614 The invention relates to a spatially-addressable set of single exon nucleic acid probes for measuring gene expression in a sample derive Also included are a microarray comprising the novel set of the novel set of probes which hybridise at high stringency to a derived their one of

                                                                            Sequences AAU39105-AAU68017 represent Propionibacterium acnes immunogenic CC polypeptides. The proteins and their associated DNA sequences are used in the treatment, prevention and diagnosis of medical conditions caused by P. acnes. The disorders include SAPHO syndrome (synovitis, acne, pustulosis, hypertosis and osteomyelitis), uveitis and endophthalmitis. P. acnes is also involved in infections of bone, joints and the central CC nervous system, however it is particularly involved in the inflammatory CC lesions associated with acne vulgaris. A method for detecting the presence or absence of P. acnes in a patient comprises contacting a CC sample with a binding agent that binds to the proteins of the invention CC and determining the amount of bound protein in the sample. The CC polypeptides may be used as antigens in the production of antibodies convergulate expression and activity of P. acnes production of antibodies CC diagnostic agents for determining P. acnes propagated as a construction of the refore treat P. acnes infections. The antibodies may also be used as CC diagnostic agents for determining P. acnes presence, for example, by CC enzyme linked immunosorbent assay (ELISA).

CC Note: The sequence data for this patent did not form part of the printed CC specification, but was obtained in electronic format directly from WIPO at the first manning the printed of the printed contraction of the printed contraction.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   日
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                δÃ
       Sequence
